

London Underground "What-If" Simulator

User Study Questionnaire

22 responses

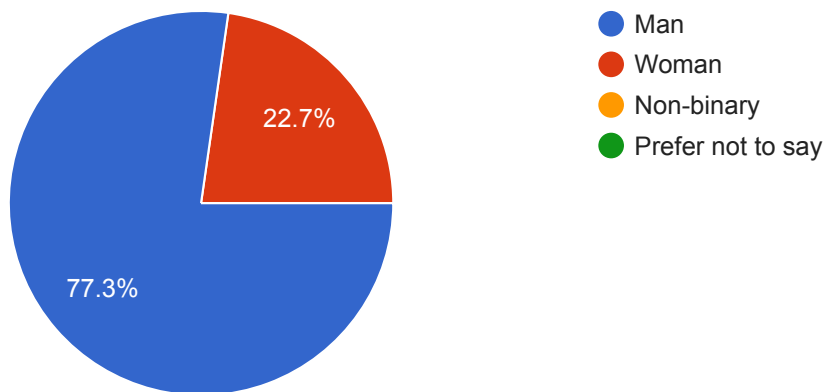

Section 2 - Background Information

What is your gender?

 Copy

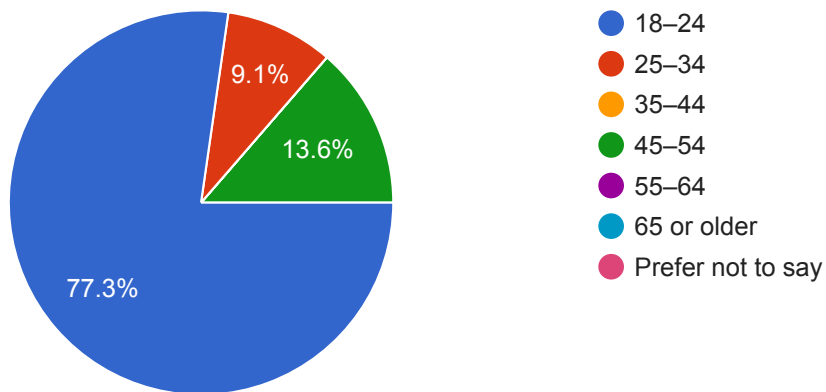

22 responses

What is your age?

 Copy

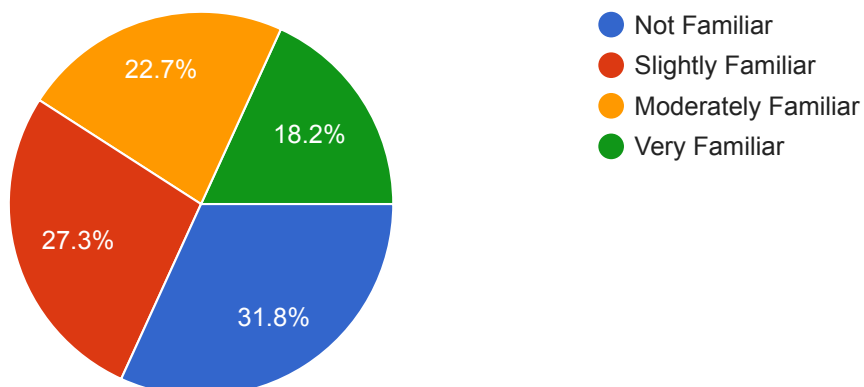

22 responses

How familiar are you with the London Underground?

 Copy

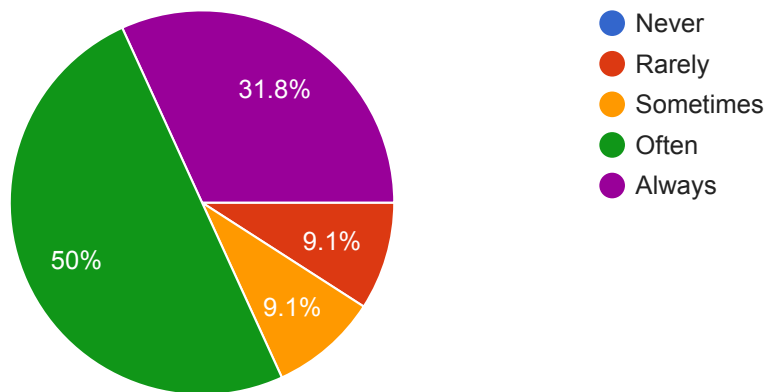

22 responses

How often do you use transport or navigation applications (e.g., Google Maps, Citymapper)?

 Copy

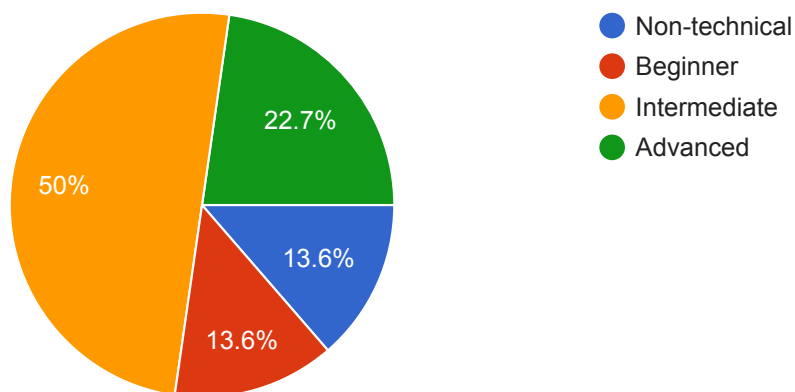

22 responses

What best describes your technical background?

 Copy

22 responses

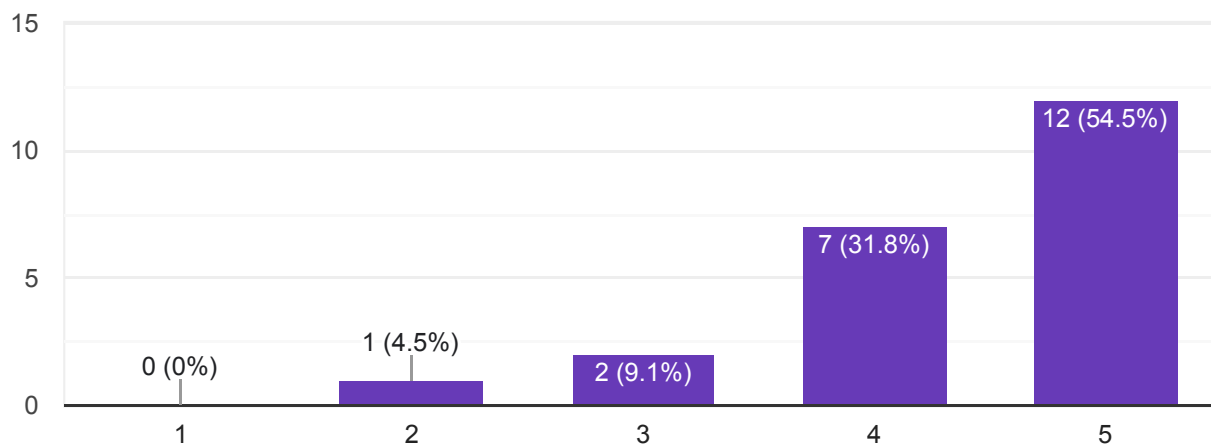

Section 3 - Task Instructions

Section 4 - Task Evaluation

I was able to complete the tasks successfully.

 Copy

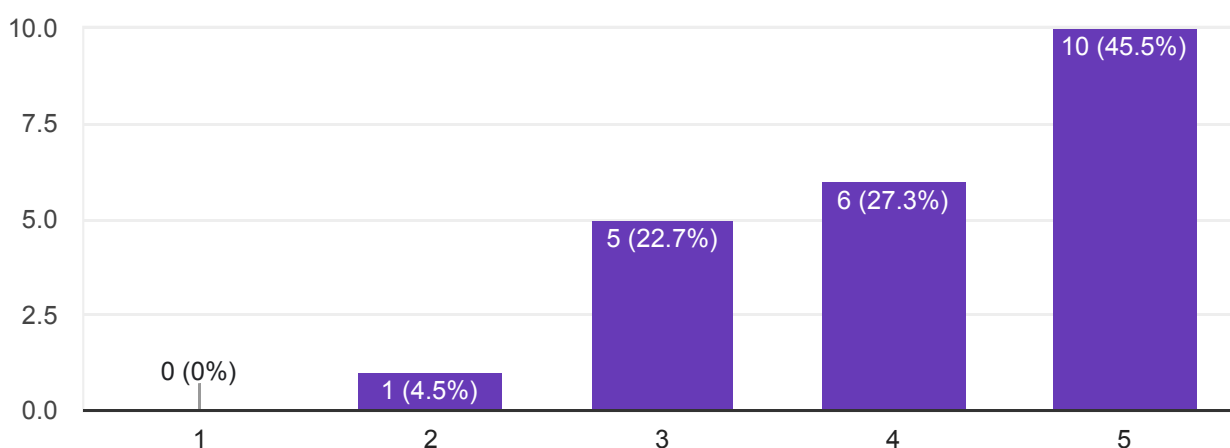

22 responses

The tasks were easy to complete.

 Copy

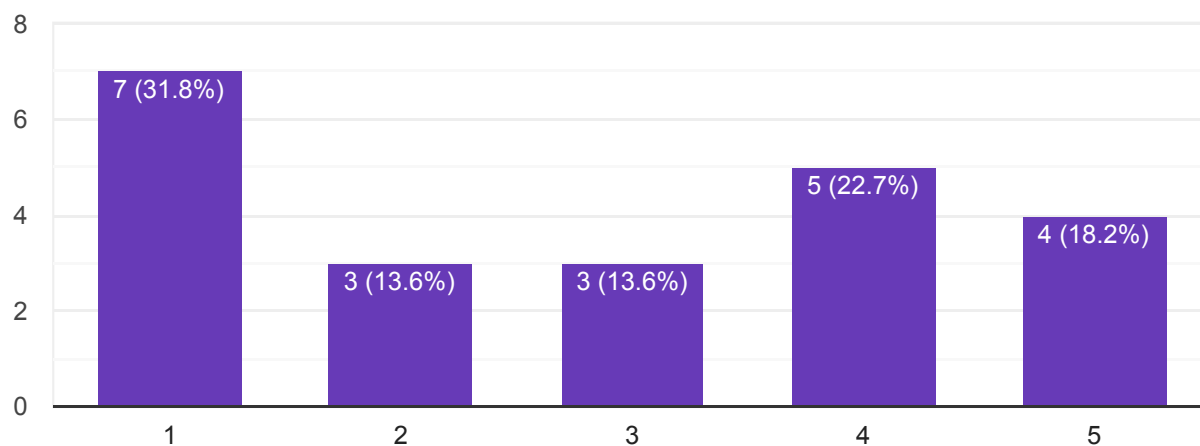

22 responses

I required assistance to complete the tasks.

 Copy

22 responses

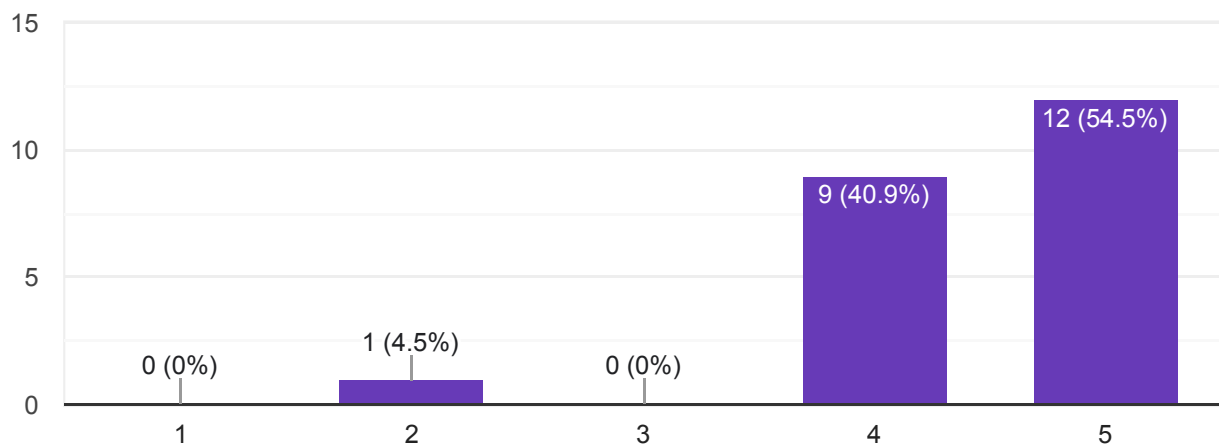

Section 5 - Feature Evaluation

The route-finding functionality is useful.

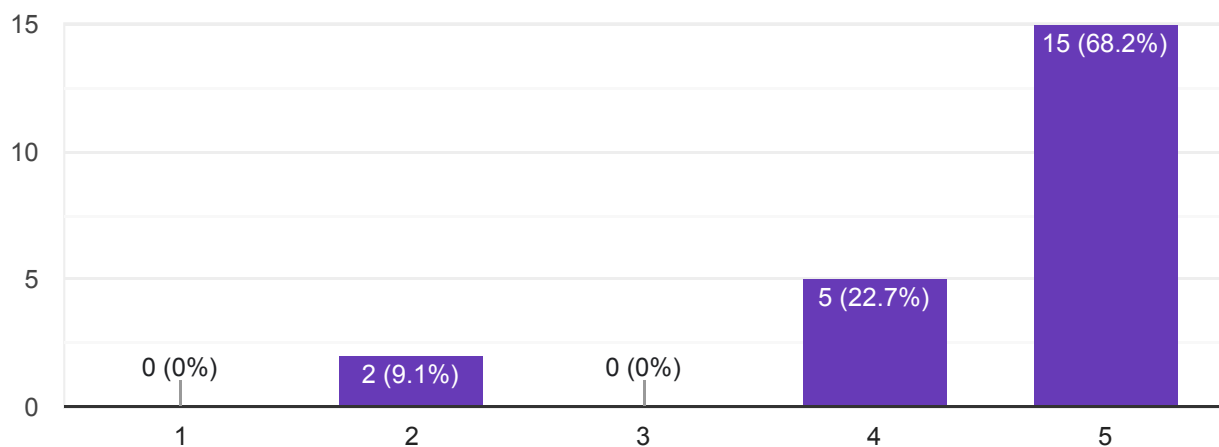

22 responses

The What-If mode is useful for simulating disruptions.

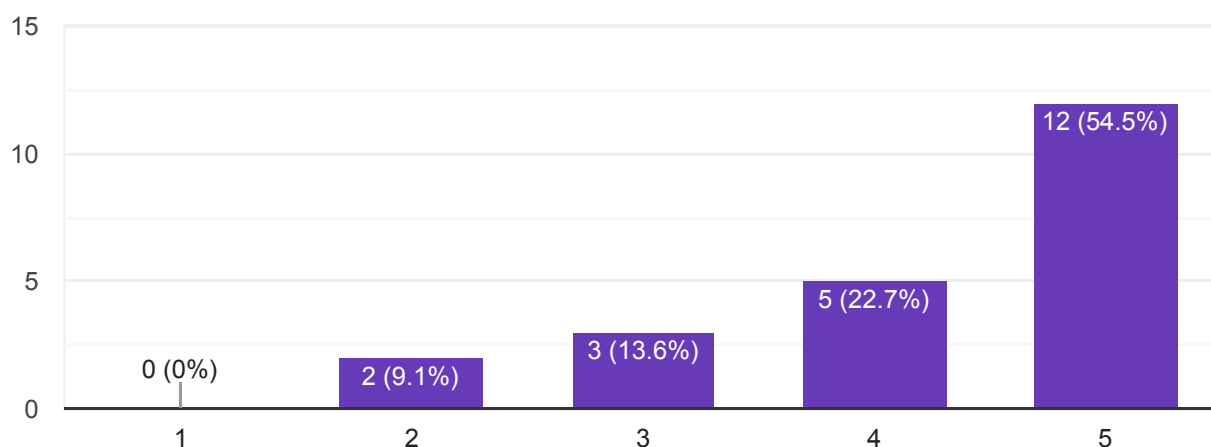

22 responses

The route information displayed on the map was clear and easy to understand.

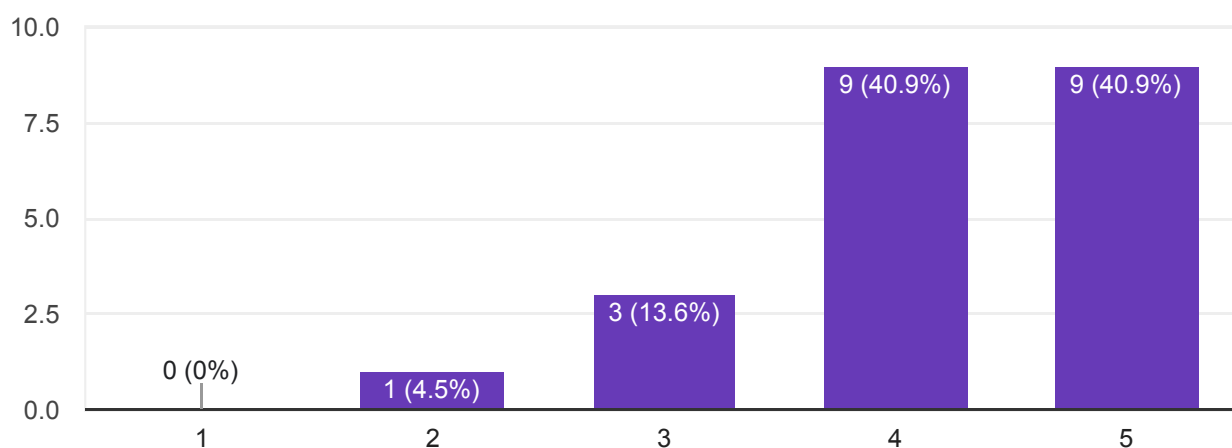

22 responses

The Underground line colours and visualisation were helpful.

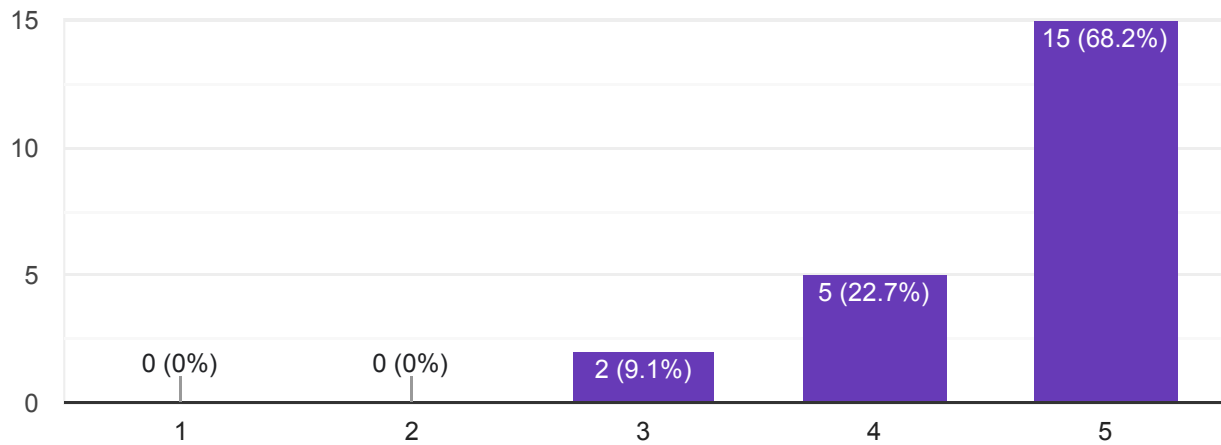

22 responses

The disruption visualisation was clear and understandable.

22 responses

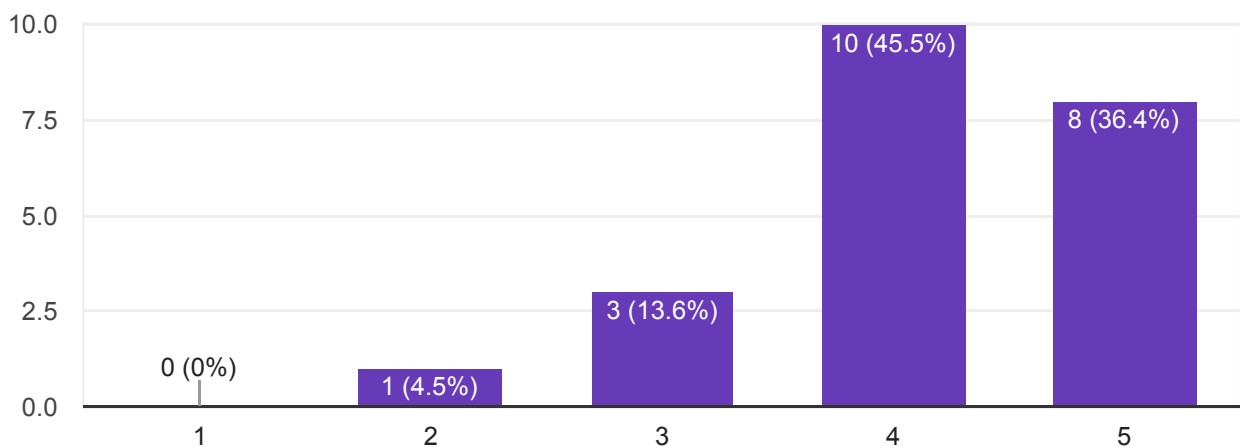

Section 6 - Usability & Design

The interface was easy to use overall.

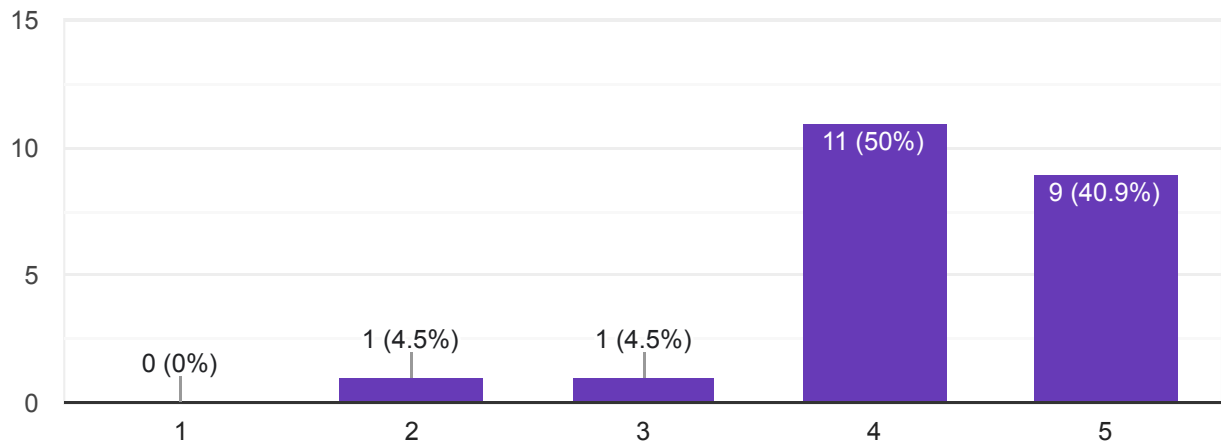

22 responses

The map controls and navigation felt intuitive

 Copy

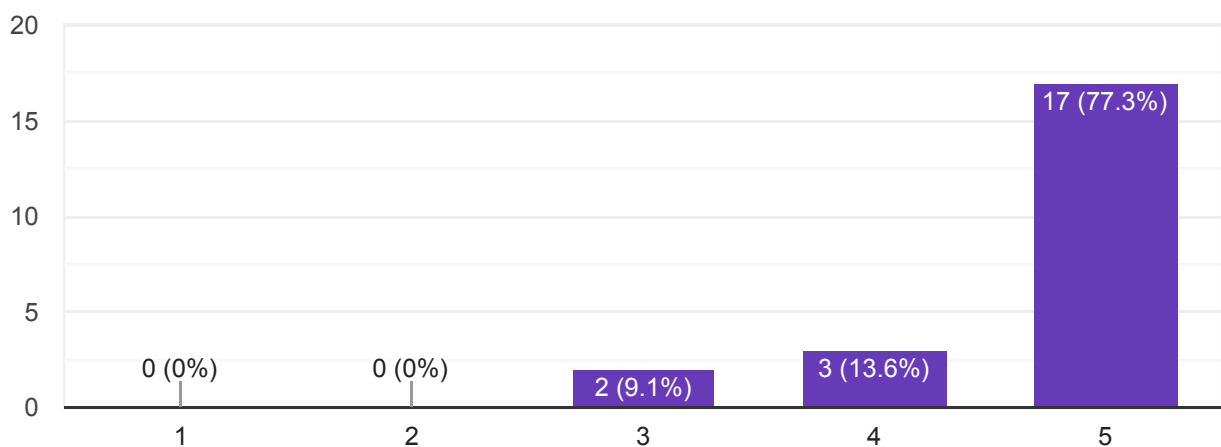

22 responses

The system responded quickly during use.

 Copy

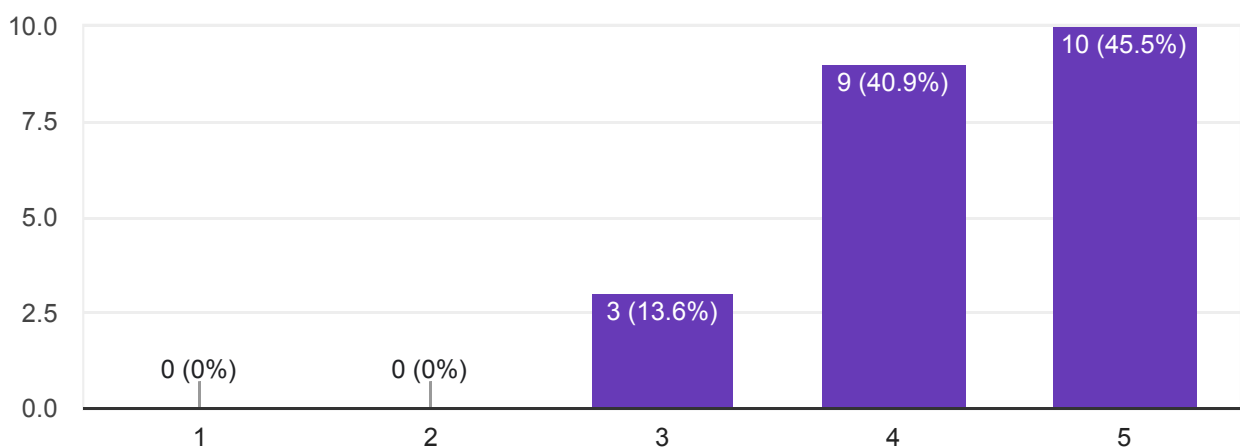

22 responses

The interface design was visually appealing.

 Copy

22 responses

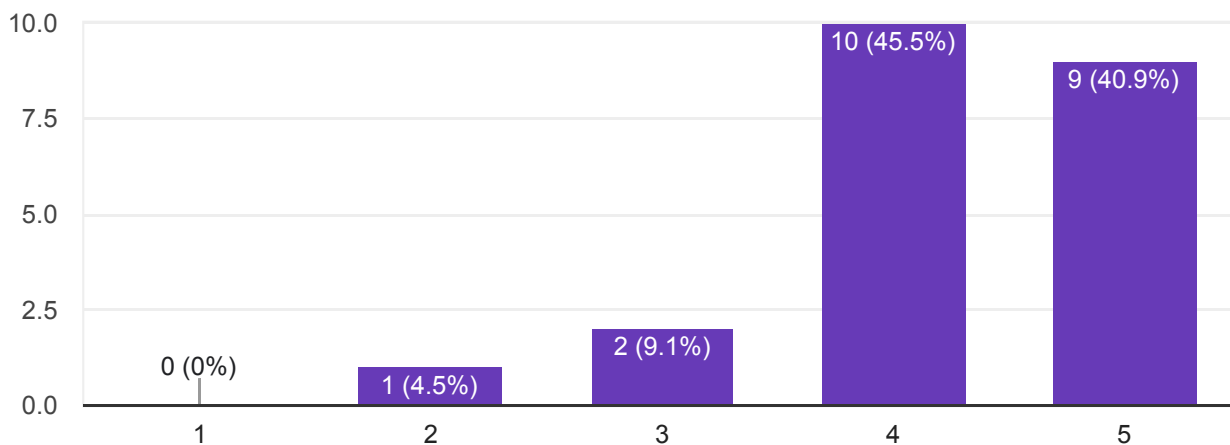

Section 7 - Overall Evaluation

Compared to existing transport applications, this system offers something unique.

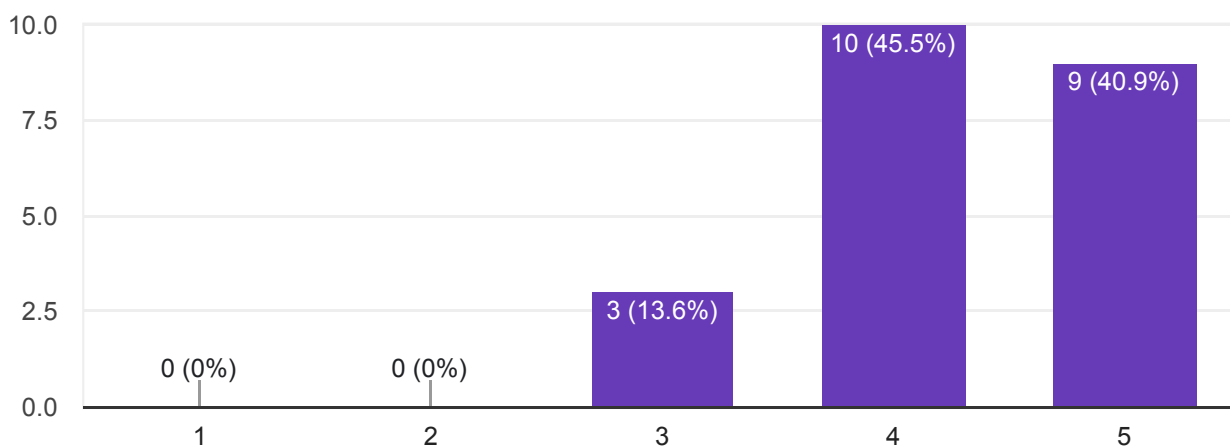

22 responses

Overall, I am satisfied with the system.

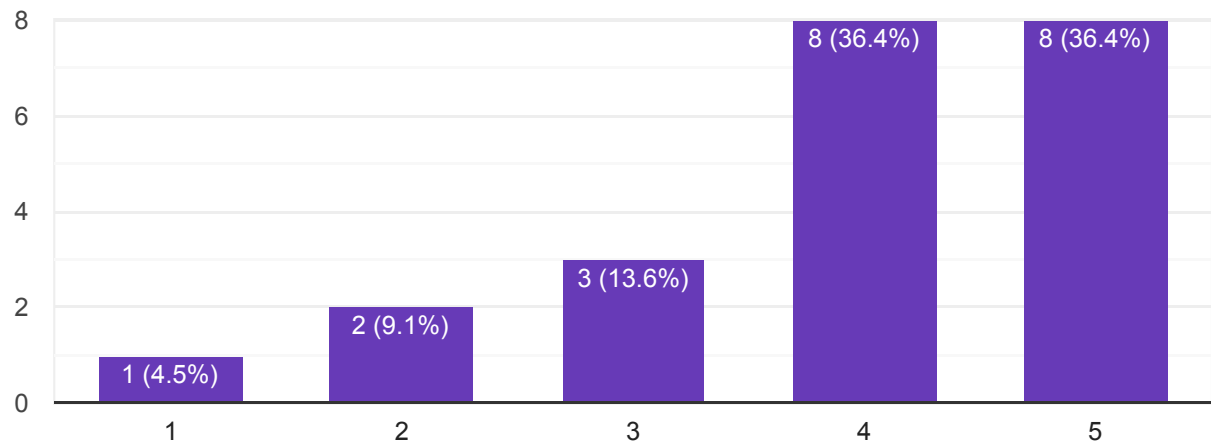

22 responses

I would use this system again.

22 responses

Section 8 - Open Feedback

What did you like most about the system?

22 responses

easy to use

I like the minimalist design

Easy search, visual appealing, live trains

How easy it was to use

The User Interface is really modern

The interface is very easy to use. Although at first it looks a bit intimidating and hard to navigate, after completing the tasks it was really easy.

the disruption feature

The What-if Ability

The clear routes

It has the street names in the background of the map

Ease of use

The UI design

The fact that you could see the instructions and the time associated with your travel

The What-If Mode it is totally unique and freaking awesome

the What-If simulator was extremely useful for a very common commuter situation.

I liked the aesthetic of the website

What if mode

The “What If” feature allowing you to close a station is incredibly useful.

What if feature

nice layout, important details clearly visible.

The what if section is cool and i like that you could select the station and it showed you how many stops

It offers a unique feature that may prove useful to some.

How could the system be improved?

22 responses

more responsive interface and a light mode as it's difficult to see in dark mode

I couldn't see the station in-between when route planning and when searching for stations if I pressed backspace I couldn't see the station I originally selected

Central view should be entire map, name of stations is obscured by station dots, what if simulator settings panel not easily identified, also add what platforms to use at the stations. Search and route detail textbox overlap and looks cluttered. After route selection you should centralise the map to see entire route.

UI colours contrast, I found the what if simulator easily but others may not, add the what if button mode on the screen rather than as a side bar menu. Maybe use a more engaging font. Maybe a different easier way to scroll across the map as clicking with touchpad and dragging is very tedious.

Add the Elizabeth Line

Maybe a small “tutorial” section with some tasks similar to how this google form is laid out,

otherwise I'd have probably been overwhelmed and not known where to start.

the navigation draw out feature

Removal of overlapping sub-screens

Including what platforms to get on

I wouldn't have found the what if pull out tab

easier direction to the "what if" option

Having a wide array of other transportation potential alternatives

clearer instruction where to find the control panel and instructions where to find the what if mode

N/A

Only thing I would suggest is highlight the tube lines with the colours that are in the current tube maps maybe to appeal to some regular commuters

Making it into an app would be more useful

Make it easier to find what if mode and probably a white background ideas of dark and bold writing on navigations with colours so it's easy to see

Make the "what if" mode easier to find.

Make the what if visible

The main menu arrow for What-if mode was not easily visible, perhaps needs to be more visible.

it could be improved by saying what the what if section is cause it isn't the clearest maybe saying if you put enter it comes up the what if part putting it in the map controls also it would be cool to have a light mode due it to being quite dark it would be nice to have a light mode and in the light mode instead of blue it being red also i think if possible change when you double click it doesn't get rid of the start destination part cause it could be annoying to have to keep redoing it if you accidentally double click

Offer the user a light mode option

Did you encounter any bugs or issues during testing?

22 responses

No

no

N/A

in struggled to find the what if mode

no, all worked well

No bugs encountered

None noted

No :)

No

No.

i don't see any errors :)
