

COMP6030 – Sprint 10 meeting minutes

Date: Monday 13th April 2026

Sprint dates: Apr 13 – Apr 17 2026

Attendees: Jaden, Sattyaj, Sinead, Saf. All team members present

Sprint goals

First week back after the Easter break. Get our bearings around the project again and resume train display work.

Tasks planned this sprint

- Regroup after the break and review where the project stands
- Re-familiarise with the codebase and the outstanding tasks
- Agree priorities for the rest of the term now the project fair is behind us
- Let the user select which line's trains to display on the map
- Refactor train ID helper functions
- Stop unnecessary re-renders when the live feed updates

Completed tasks and notes

- First week back after the break. Spent some time as a team getting our bearings again, re-reading the code and docs and agreeing what to prioritise for the rest of term.
- Added an option for the user to choose which line they want to see trains for, rather than showing all of them at once.
- Stopped a child-parent update loop that was firing on every feed update, removing unnecessary re-renders and improving performance.
- Moved some of the helper functions out of useTrainMovements into a dedicated trainIdUtils file.
- Slower week overall as we got back into the swing of things after time away.

Blockers / Issues

- Took a little while to get back up to speed after the break.
- Needed to re-agree priorities now that the poster and project fair are done.

Actions / Next steps

- Move the live trains TfL API call to the backend
- Continue tidying the train modules
- Plan the remaining feature work for the term
